

Product Description

The fixture's visible component is a rectangular faceplate, featuring four deeply recessed circular light apertures arranged in a linear fashion. The "trimless" design ensures that once installed, there is no visible bezel or frame, allowing for a clean, architectural aesthetic where the light appears to emerge directly from the ceiling surface. Constructed from die-cast aluminum, this fixture is built for durability and efficient heat dissipation. It uses a Smalite 3535 LED chip and has a total system power of 12W, delivering a fixture lumen output of 840lm with a system efficiency of 70lm/W.
